Experience the world's largest stainless steel community

Innovations and know-how surrounding production, processing and finishing as well as trade of stainless steel products: More than 400 exhibitors present the entire world of stainless steel in Düsseldorf, both at wire – featuring the global leaders and pioneers of the wire and cable industry – and at the parallel Tube fair.

Meet international professionals. Because if you want to succeed in business, you must be where the investors, innovators and top decision makers as well as leading producers and traders are: at the world's leading trade fairs wire and Tube.

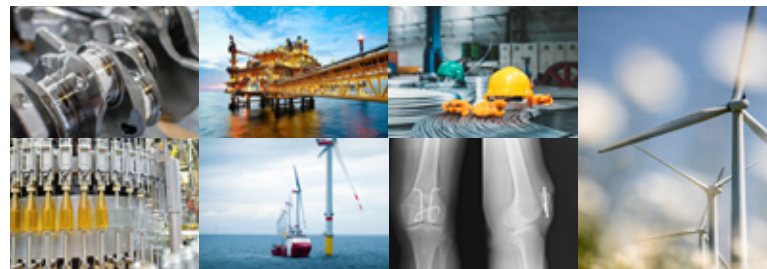

Stainless steel: Variety across industries & applications

Stainless steel is characterised by a high resistance to corrosion, mechanical strength and thermal stability – and is used in applications across a variety of industrial areas:

Automotive industry: Safety systems, cable pulls, brake lines and other components require mechanical stability and durability.

Chemical, gas and oil industries: In environments with aggressive chemicals and corrosive substances, stainless steel cables and wires are irreplaceable due to their excellent resistance to corrosion and chemicals.

Construction: Stainless steel cables are used on railings, cables for suspension bridges, architectural net structures and similar applications – both for functional and aesthetic reasons.

Food and beverages industry: Stainless steel cables in conveyor belts, hanger assemblies, suspended transport and other applications conform to strict hygiene requirements and offer top endurance.

Marine and offshore industries: Stainless steel cables and wires resist salt water, humidity and extreme weather conditions.

Medical technology: Stainless steel cables and wires convince even where hygienic conditions and tolerance towards the material are of great importance.

Energy business: In the generation of energy, whether in conventional power plants or renewable energy generation systems, stainless steel cables and wires are used because of their resistance to higher temperatures and environmental stress.

Decision-makers are at wire – the world's No. 1

Why don't you, too, join in the highest-level meetings for new impulses, networking, professional small-talk and big business!
